

Sprint 1 Report: Rendezvous

Team Members: Claudio Sangeroki, Ulysses Uribe, Jeshwanth Bheemanpally, Navika Gupta, Adarsh Sekar

Actions to stop doing:

We decided to not use React native to implement our app. We instead decide to work with Flutter.

Actions to start doing:

Better sprint planning, having more detailed tasks and better delegation of tasks as they allow tasks to be marked off as complete. Use Trello to keep the team updated about tasks. Start implementing Planning Poker when doing the sprint plan.

Actions to keep doing:

Assigning people specific deliverable tasks, having daily check-ins so that we can all update each other on our progress. Constantly push and merge code on git so we can all have updated versions.

Work completed:

1. Users are able to navigate between pages
2. Users are able to see the home page when the app is opened, and can enter a username
3. Users are able to navigate to a map where they can see their current location, and change their location using a search bar, and a marker button.
4. Users can also see the midpoint of multiple locations
5. Got Heroku set up for backend

Work not completed:

1. Users are not able to enter a room

Work Completion rate:

All tasks assigned on the Trello are generally completed by the end of the week.

80% of tasks completed
